Digital Literacy Portfolio

Name: *Ranveer singh kushwah*

Registration Number: 25BCE10194

Branch: B.Tech

Course Code: CSE0001

University: VIT Bhopal

📖 INTRODUCTION (100–150 words)

The Digital Literacy Portfolio project was designed to help students understand and develop essential digital skills required in today's world. As a Student Digital Ambassador, my role was to explore various aspects of digital literacy, including online presence, communication, collaboration tools, and cybersecurity awareness.

Through this project, I worked on multiple tasks that involved creating an infographic, building professional profiles, exploring online platforms, drafting formal emails, and understanding cybercrime. These activities provided practical exposure to tools and concepts that are widely used in academic and professional environments.

Overall, this project helped me become more confident and responsible while using digital technologies.

🟣 TASK 1 WRITE-UP (150–200 words)

I created a digital literacy infographic using Canva, a user-friendly online design tool. The infographic highlights key aspects such as the meaning of digital literacy, useful tools for students, safe internet practices, professional online presence, and email etiquette. The aim was to present essential information in a clear and visually engaging format.

I used a minimal design with icons and a limited color palette to maintain clarity and readability. The process of organizing information visually was both interesting and challenging. One of the difficulties I faced was ensuring that the content was not overcrowded while still being informative.

This task helped me understand how visual communication can be effectively used to spread awareness and convey important concepts in a simplified manner.

🔵 TASK 2 WRITE-UP (150–200 words)

In this task, I created and updated my profiles on GitHub, LinkedIn, and HackerRank. GitHub is a platform used for hosting and showcasing projects, while LinkedIn is a professional networking site that helps in building connections and exploring career opportunities. HackerRank is a coding practice platform that helps improve problem-solving and programming skills.

Over the next four years, I plan to use GitHub to upload and manage my projects, which will help in building a strong portfolio. LinkedIn will be used to connect with professionals, learn from industry experts, and explore internship opportunities. HackerRank will assist me in improving my coding abilities through regular practice.

This task helped me understand the importance of maintaining a professional digital presence and how these platforms can contribute to my academic and career growth.

🟢 TASK 3 WRITE-UP (150–200 words)

In this task, I explored HackerRank and Google Forms. On HackerRank, I solved a beginner-level problem which introduced me to coding practice platforms and helped me understand basic problem-solving techniques. It was a simple yet valuable experience that motivated me to continue improving my programming skills.

Additionally, I created a Digital Literacy Awareness Quiz using Google Forms. The form consisted of five questions designed to test basic knowledge of digital literacy among students. I also viewed responses through the linked Google Sheet, which demonstrated how data can be collected and analyzed efficiently.

These tools are highly beneficial for academic purposes, as they support learning, collaboration, and data collection. This task enhanced my understanding of how digital platforms can be used effectively in education.

🟡 TASK 4 WRITE-UP (100–150 words)

Poor digital communication can lead to misunderstandings and create a negative impression. For example, sending an email without a proper subject line or using informal language when communicating with a professor may appear unprofessional.

To avoid such situations, it is important to follow proper email etiquette, including using clear subject lines, maintaining a polite tone, and structuring the message properly. Proofreading emails before sending them is also essential.

This task helped me understand the importance of professional communication and how it plays a crucial role in academic and professional settings.

🔴 TASK 5 WRITE-UP (100–150 words)

While researching cybercrime, I was surprised by how easily people can be manipulated into sharing sensitive information. Many frauds rely more on psychological tactics than technical hacking.

I learned that even a small mistake, such as clicking on a suspicious link or sharing an OTP, can lead to serious financial loss. As a result, I will be more cautious while using online payment systems and will never share my personal or banking details.

This task increased my awareness about online safety and encouraged me to adopt better digital habits.

📄 CONCLUSION (100 words)

This project provided valuable insights into various aspects of digital literacy, including communication, online presence, and cybersecurity. It helped me develop practical skills that are essential for both academic and professional environments.

By completing these tasks, I gained confidence in using digital tools responsibly and effectively. I also understood the importance of maintaining a professional identity online and staying aware of potential cyber threats.

Overall, this project was a meaningful learning experience that will benefit me in the long run.
